

ENDING FOOD WASTE TO LANDFILL WITH THE INFLATION REDUCTION ACT

In a major effort to align the full financial power of the federal government with clean energy transition, **the 2022 Inflation Reduction Act (IRA)** provides a holistic, economy-wide approach that **incentivizes greenhouse gas emission reductions**, with a particular focus on benefitting underserved communities.

GBB's commitment to creating a **world where discarded materials are used as resource rather than wasted** is supported by 40+ years of solving complex waste management challenges, aligning with the IRA's goals.

That's why GBB is delving deeper into the act's provisions and has identified the **many resources available** to **public** and **private** entities to fund and realize their waste reduction projects.

From idea to implementation, **GBB can help you** find out the resources available at any stage of your project.

ABOUT GBB

- National leader in sustainable materials management consulting
- 67 communities served in the last 3 years
- Headquartered in the Washington, DC Metro area
- SWANA-certified consultants

\$400+ Billion

Dedicated to energy and climate-related activities

Direct Pay

For non-tax paying entities

Tax Credits

To cover 50% of project costs
